SYSPRO Avanti – Web Interface

Increased connectivity and rapid globalization is enabling manufacturers and distributors to move into new markets, territories and countries and changing the way they operate.

Business owners need to quickly and easily connect to their ERP from anywhere at any time and on any device; and individual users need to be able to flexibly access and use their ERP based on their role, operational need, remoteness locality, or preference.

Whether deployed on-premise, in the cloud, or both (hybrid), SYSPRO gives you the choice and flexibility to quickly and easily access your SYSPRO ERP solution through a web browser, 24/7, no matter where you are.

With SYSPRO Avanti, SYSPRO's web based interface, you can choose the device that best meets the task at hand, whether in office, on the shop floor, or on the move. And because the web interface uniquely delivers the same familiar SYSPRO experience in a web browser it is intuitive and easy-to-use.

The Benefits of SYSPRO Avanti

Quick and Easy Access

If you're in manufacturing or distribution, whether you're upsizing, setting up a new company or expanding your multi-national organization to new territories, SYSPRO's web interface (SYSPRO Avanti) gives you quick and easy access to SYSPRO through a web browser.

Familiar Experience

SYSPRO Avanti, with its consistent user interface, uniquely gives you the same SYSPRO ERP user experience through a web browser on any device, without having to learn a different operating system.

Enables You to Work When and Where You Want

Access and experience the same SYSPRO solution on all devices 24/7 no matter where you are. Whether in office, on the shop floor, or on the move, you can choose the device that best meets the task at hand.

Flexibility and Choice

Select the best UI for the role as well as specific task at hand, through a desktop or browser on any device, from anywhere.

Engaging User Experience

SYSPRO's beautiful web interface is easy-to-use, intuitive and responsive, providing you with a simplified, engaging and rewarding experience.

Design Your Workspace

SYSPRO Avanti web interface allows for easy customization without the need to get development involved, enabling you to personalize and design your workspace.

> **SYSPRO Avanti, is a refreshing interface for an ERP system that improves the User Experience to a new level, and in my humble opinion can be considered the standard for the 21st Century.**

SYSPRO Avanti Capabilities

Single License Model for Bimodal UI

Users of SYSPRO do not need to purchase additional licenses to access SYSPRO Avanti. Using a single concurrent license, users can choose to use the rich windows UI or the web HTML5 interface, Avanti – allowing them to easily select the best UI for the role as well as the task at hand, without any commercial implications.

Easily and Quickly Deployed

SYSPRO Avanti does not require any installation on the Windows desktop or device, all that is required is a web browser. In addition, this removes the requirement for client installations, virtualization or desktop emulation software.

Consistent and Responsive Design Across All Applications

For customers used to the SYSPRO Windows UI, SYSPRO Avanti will be familiar. The behavior of the applications is designed to be similar, enabling an easy transition between the two. In addition, the design of the UI is fluid, meaning the web page content automatically fits into the available screen size, whether you are using a desktop browser or a smartphone.

Easily Access on Any Device, on Any Platform, from Anywhere

Access your SYSPRO ERP though a browser using the SYSPRO Avanti web interface on a desktop, tablet or mobile device using the same credentials, the same concurrent license and the same security settings.

Enhanced Leading-Edge User Interface

SYSPRO Avanti in HTML5 and with pre-customized screens provides a simplified, responsive and intuitive user interface. This is being done by the re-classification and re-organization of screens and fields into logically grouped areas for better information delivery to the end-user.

User Defined

All the same user defined criteria, including credentials and security settings, that exist within SYSPRO exist within SYSPRO Avanti. In addition, the Home Page in Avanti can be defined at the role level, giving administrators the ability to determine the content for users.

Improved Search Capabilities

Automatic Predictive Search is enabled in Avanti, improving on the search capabilities of the application. This helps you effortlessly get to the information you need by filtering the top records in the database based on what you have already typed.

Personalized Workspace

Create new functionality or carry over current SYSPRO Customization into Avanti. You can tailor applications with no development effort using the Visual Designer. This allows administrators to change the layout of any application, and to add or remove functionality. Additionally, some of the customization implemented in the same SYSPRO Windows client application will be automatically applied in Avanti.

Run Multiple Sessions Simultaneously

As with a modern browser experience, you can have multiple programs or sessions running simultaneously by opening new tabs, allowing you to switch between them as required.

Faster System Performance

Avanti was developed in HTML5, so it is possible to refresh specific fields on a screen as opposed to the entire page. This means that a smaller amount of data is sent between the server (where the application is running) and the browser client. This has a net effect of reducing the network traffic significantly.
